Product Dynamics Reduces Product Development Time and Expense with Rapid Prototyping

Product Dynamics has added the Dimension® 3D Printing System to their in-house product development and design services. Utilizing CAD geometry, the Dimension® 3D Printer builds fully functional models quickly in sturdy ABS plastic. Multiple iterations of a design can now be quickly generated to prove out fit, function and appearance, resulting in more accurate prototypes and reducing potential problems in production.

Product Dynamics, Ltd. has built its reputation on excellence in model making. Recognized as a leader in the design and fabrication of precision prototype models, Product Dynamics has been a proven product development and prototyping resource for 28 years. Their experienced staff of model makers, sculptors, designers and casting technicians is capable of providing a wide range of services for applications from consumer products to toys.
