Product Dynamics purchases High Speed CNC Machining Center

Product Dynamics Reduces Product Development Time and Expense with High Speed CNC Machining.

Product Dynamics has added a Fadal CNC Vertical Milling Station, improving the speed and flexibility of their in house resources. The Fadal has a tool carousel that can hold 16 cutters; this will reduce costly setup time allowing personnel to program tool paths for the next part. With a spindle speed of 7500 rpm the feed rate can be increased, greatly reducing the amount of time required to cut complicated parts. The ability to rapidly produce parts often within one day has helped Product Dynamics serve its clients better.

Product Dynamics, Ltd. has built its reputation on excellence in model making. Recognized as a leader in the design and fabrication of precision prototype models, Product Dynamics has been a proven product development and prototyping resource since 1976. Their experienced staff of model makers, sculptors, designers and casting technicians is capable of providing a wide range of services for applications from consumer products to toys.
